

AutoMS AUTOMATION SCIENCE SOLUTIONS

X-ray Machines & Metal Detectors for Food

KEY BENEFITS

When we asked the owner of AutoMS what key benefits he has experienced from adopting AssetPool, he said “giving multiple clients access to view the status of their equipment on site, if an asset fails an inspection the client can see it in real time. Having the evidence and images also helps to show that our technicians are doing inspections correctly and if something is broken we can provide the evidence and quote on repairs immediately.” One of the benefits from being able to quote on repairs is increased revenue.

- **Machine Physical Condition Monitoring** - They now have a live status of the condition of this equipment.
- **Increased Productivity and Performance Management** – The technicians at AutoMS have increased efficiency through the ability to send completed inspections digitally rather than having to hand in paper checklists to head office.
- **Geo Location** – The managers now have precise locations of each of the technicians as well as the assets.
- **Real-time Data and Reporting Insights** – AssetPool’s reporting dashboards give AutoMS the ability to report on the health of their assets at any given moment.

HOW DID ASSETPOOL HELP

AutoMS is a company that offers new equipment sales, service calibration, validation, training, and breakdown support. They deal with any metal detector, check-weigher or x ray machine. Some of their clients include Pioneer Foods, RCL Foods, Beyers Chocolate and Bokomo.

Prior to adopting AssetPool, AutoMS completed their inspections with paper and pen and then entered that information into an excel spreadsheet once the technician arrived back at the office. AutoMS used to manually fill out forms on site when doing inspections, then print out the machine specific data sheet with the previous settings on it. They had to then manually edit the excel sheet and then email it to their client.

Through the use of AssetPool, Mark Kirk, owner of AutoMS, has been able to have a wholistic view of his company’s assets. He can now view any piece of equipment with a click of a button. He has peace of mind knowing that his technicians are completing their inspections correctly and timely. **This has led to increased revenue for AutoMS** as they are now able to complete more asset inspections in a day than they were previously able to.

“Bringing AssetPool into AutoMS has changed the way we do business, we used to manually print out inspection reports, write them out on site and then manually get the technicians to capture the information when they got back to the office. This means the technicians can do more inspections and do more jobs in one day.” - Mark Kirk, Owner of AutoMS
