ASSETPOOL

SOUTH AFRICAN GAME RESERVE

Wildlife Preserve

KEY BENEFITS

The Game Reserve found the following key benefits switching to AssetPool's smart inspection software:

- **Fence physical condition monitoring -** The ability to have a full history of the fence's inspections
- **Staff efficiency & performance management -** They can now monitor how long it would typically take to inspect the fence.
- **Paperless record keeping** - There is no need for a paper filling system.
- **Immediate data access**
- **Damage & Accident reporting** – In the case of an accident, such as an animal escaping from the enclosure, the Game Reserve can now proof with photographic evidence that the fence was properly maintained.
- **Adherence to guidelines for fencing requirements**

HOW DID ASSETPOOL HELP

Running a Game Reserve comes with many responsibilities, including monitoring and maintenance of the perimeter fence and this can be challenging to manage.

With AssetPool's smart inspection platform this becomes a simple process of scanning the QR code, selecting the appropriate checklist and updating the list during the physical inspection; photographic evidence is also attached to the inspection.

Reporting allows for monitoring of both inspections conducted and asset performance, areas of concern become apparent and can be addressed.

When a technician is sent out to inspect the fence, it may take hours to complete and which point he would return with the paper checklist. With AssetPool, the owner of the Game Reserve would be able to instantly see if there was an issue with the fence.
